Ubung 4B

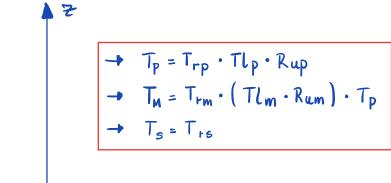

$$t_{rp} = 1 Tag$$
 , $t_{up} = 365,25 Tage$
 $t_{rm} = 27,3 Tage$, $t_{um} = 27,3 Tage$
 $t_{rs} = 25 Tage$

 \rightarrow Zeit einheit in Stunden \rightarrow t in "h"

$$y_{rp}(t) = \frac{360^{\circ}}{24h} \cdot t = t \cdot 15^{\circ} \qquad y_{up}(t) = \frac{360^{\circ}}{2766h} \cdot t \approx t \cdot 0.04^{\circ}$$

$$y_{rm}(t) = \frac{360^{\circ}}{655.2h} \cdot t \approx t \cdot 0.55^{\circ} \qquad y_{um}(t) = \frac{360^{\circ}}{655.2h} \cdot t \approx t \cdot 0.55^{\circ}$$

$$y_{rs}(t) = \frac{360^{\circ}}{600h} \cdot t = t \cdot 0.6^{\circ}$$

Mittelponkt von Sonne, Mond und Erde in einer Ebene -> Transformation auf der x,y-Ebene (2D).

Transformations matrix Planeten:

$$R_{ip} (t) = \begin{pmatrix} cos(t \cdot 0.04^{\circ}) & sin(t \cdot 0.04^{\circ}) & O \\ -sin(t \cdot 0.04^{\circ}) & cos(t \cdot 0.04^{\circ}) & O \\ O & O & 1 \end{pmatrix}$$

$$R_{rp}(t) = \begin{pmatrix} \cos(t \cdot 15^{\circ}) & \sin(t \cdot 15^{\circ}) & O \\ -\sin(t \cdot 15^{\circ}) & \cos(t \cdot 15^{\circ}) & O \\ O & O & 1 \end{pmatrix}$$

$$Tl p=(t) = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 149. & 6. & 10^{6} \text{ hm} & 0 & 1 \end{pmatrix}$$

$$T_p(t) = R_{rp}(t) \cdot T_{lp}(t) \cdot R_{up}(t)$$

Transformationsmatrix Mond:

$$R_{UM}(t) = \begin{pmatrix} \cos(t \cdot 0.55^{\circ}) & \sin(t \cdot 0.55^{\circ}) & O \\ -\sin(t \cdot 0.65^{\circ}) & \cos(t \cdot 0.55^{\circ}) & O \end{pmatrix}$$

$$R_{rm}(t) = \begin{pmatrix} \cos(t \cdot 0.55^{\circ}) & \sin(t \cdot 0.55^{\circ}) & O \\ -\sin(t \cdot 0.65^{\circ}) & \cos(t \cdot 0.55^{\circ}) & O \\ O & O & 1 \end{pmatrix}$$

$$Tl_{m} = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 384.400 km & 0 & 1 \end{pmatrix}$$

Transformationsmatrix Sonne:

$$T_{s}(t) = R_{rs}(t) = \begin{pmatrix} \cos(t \cdot 0,6^{\circ}) & \sin(t \cdot 0,6^{\circ}) & O \\ -\sin(t \cdot 0,6^{\circ}) & \cos(t \cdot 0,6^{\circ}) & O \\ O & O & A \end{pmatrix}$$
